

## Advantages:

### IDEA 1

- Simpler process  
simple in construction
- Accidents can be avoided
- Cost is comparatively cheaper to solar panel based reflector
- Purpose is not lost as such in speed breaker model

### IDEA 2

- Not affected by stagnant water

## 8. Disadvantages:

### IDEA 1

- Hard to place it
- Spoiled by stagnant water

### IDEA 2

- expensive than idea 1

## 9. Conclusion:

From this paper we heard new techniques making reflectors self sufficient for its energy needs which will reduce the accidents or making the drivers alert about the track when they are driving at nights. I hope that these ideas will be taken into consideration and implemented so that it will be helpful to the drivers driving at nights indicating the crossings, tracks, and road closings...etc.

## Acknowledgement:

No one walks alone on the journey of life. just where do we start to thank those that joined us, walked beside us, and those promoted our work along the way continuously first of all we express our sincere thanks to **Dr.P.CHINNA DURAI**, The secretary and correspondent, for having given us the consent to initiate the work. We wish to express our deep sense of gratitude to **Dr.KARTHIKAN**, HEAD OF THE DEPARTMENT [mechanical] for his able guidance, technical suggestions and prompt initiations. In addition to that we express our thanks to **Dr.K.MANI**, Principal, for his sincere supervision and through review.
